Presentation of the “Apinote” project

The project's objectives:

Apinote is an expense report mobile application that allows you to manage your purchases and expense reports in real time.

The tool also allows you to send all your expense reports, which will then be decoded by the application and integrated into your personal space. You can change them at any time.

The HR or manager can then approve the expenses and accept or reject them. The Apinote application is easy to use thanks to the editing of summary tables facilitating your reports and therefore better management of expense reports.

HR part:

When the hr is connected he has access to the list of Employees with the following interface he can modify or delete the employee account. For security it is he who registers the employees in the application because he has access to a creation of an employee account. In the list there is the link for each note of the selected employees or the note is by default In Progress, he can then validate or reject the employee's expense report.

Employee part:

The employee once logged in accesses an expense report form with the information following the Type, price, image, date and a comment. The note can be modified only when it is in progress once validated it will not be able to modify it any more.

An easy-to-use interface accompanies this expense report with a Delete or Modify note button and respective colors for each status of the note.
